SUMMARY

Data Engineer with 3 years of experience building ETL pipelines and data warehouse infrastructure on AWS. Cut pipeline runtimes by 3 hours at Guitar Center, reduced data quality issues across legacy and live systems, and led a churn analysis initiative that delivered real-time executive reporting to the COO. Strongest in Python, SQL, and performance tuning across the full pipeline lifecycle.

SKILLS

Programming Languages: Python, Java, C/C++, JavaScript (React)

Cloud & Infrastructure: AWS, Docker, Kubernetes, Airflow, Git

Data & ML: Spark (PySpark), Kafka, Snowflake, Redshift, dbt, Scikit-learn, SciPy, Tableau

Databases: SQL, PostgreSQL, MySQL, MongoDB, ElasticSearch, Redis

WORK EXPERIENCE

Software Developer

San Francisco, CA

ViViVerse Studio

Dec 2025 - Mar 2026

- Built a small-scale adventure app using React and Firebase, implementing real-time state synchronization via WebSocket and user session management.

Software Engineer

Berkeley, CA

University of California, Berkeley

Sep 2021 - Jun 2022, Jan 2024 - Dec 2024

- Built a Python parser to process large-scale text streams and load structured output into a relational database for downstream analysis with SQL and pandas.
- Designed a fuzzy search algorithm in Python to query a cloud database, reducing manual data retrieval workload by approximately 60%.
- Developed and deployed a REST API for FactGrid that automated key lookups, eliminating 15% of null values and improving data consistency across the local database.

Data Engineer

Westlake Village, CA

Guitar Center

Jul 2022 - Sep 2023

- Identified and resolved data discrepancies between an offshore EDW and a local AWS data warehouse, reducing null values by 5% in new ingestion and 28% in legacy records.
- Optimized stored procedures within the ETL pipeline, cutting data pull times by 3 hours and increasing downstream Tableau availability by 37%.
- Migrated backend data pipelines from batch-refresh to live ingestion, enabling real-time data updates in production Tableau dashboards.
- Led a 6-month churn analysis initiative using Python and AWS, presenting findings to the COO and building a Tableau dashboard with live data feeds for ongoing decision-making.

EDUCATION

Georgia Institute of Technology

Master of Science, Computer Science (Computing Systems)

Starting Fall 2026 (Expected 2029)

University of California, Berkeley

Bachelor of Arts, Data Science

Aug 2018 - May 2022
